Access controls worksheet

	Note(s)	Issue(s)	Recommendation(s)
Authorization /authentication	**Objective:** Make 1-2 notes of information that can help identify the threat: • *Who: the account Legal\Administrator, which matches Robert Taylor Jr., a legal attorney working as a contractor.* • *When: 10/03/2023 at 8:29:57 AM. The event was a payroll event added in the FAUX_BANK system.* • *Device: the computer Up2-NoGud, with IP address 152.207.255.255.*	**Objective:** Based on your notes, list 1-2 authorization issues: • *Robert Taylor Jr. has Admin authorization, the highest level, even if he is only a contractor and a lawyer. In the user list almost every account is Admin, from the graphic designer to the sales associates.* • *No. His contract ended on 12/27/2019, but his account was still active almost four years later and was used to add a payroll event. Joanne Phelps and Lei Chu also have an end date in 2020 in the list, and Lei Chu's account was used only two days ago.*	**Objective:** Make at least 1 recommendation that could prevent this kind of incident: • *Technical: disable an account on the day the contract ends, and make contractor accounts expire automatically, for example after 30 days unless someone renews them.* • *Technical: turn on multifactor authentication (MFA) for every admin account.* • *Operational: apply least privilege with role-based access, so that only the people who work with payroll can reach it.* • *Managerial: review the list of users and their permissions on a regular schedule, for example*
